

Durable Driveways with Decorative Hardscaping

Your driveway forms the first impression of your property, combining functionality with curb appeal. Lark Landscape's [hardscaping service](#) offers decorative driveway solutions—interlocking concrete pavers, exposed aggregate concrete, and stone-set driveways—that balance durability with style. Interlocking pavers come in various shapes, colors, and textures, enabling custom patterns such as herringbone or running bond. Their flexible installation resists cracking and allows for easy individual unit replacement. Exposed aggregate concrete showcases polished riverstone or crushed granite surfaces, offering slip resistance and a unique aesthetic. Stone-set driveways use large natural stone slabs set in mortar or gravel for a prestigious look. We perform sub-grade compaction, install edge restraints, and integrate drainage channels to prevent water pooling. For seamless transitions, driveways blend into adjacent patios and walkways through matching materials and joint treatments. Low-voltage driveway lighting embedded in borders enhances nighttime visibility and adds sophistication. After installation, we seal surfaces to protect against oil stains, UV damage, and freeze-thaw cycles. Visit our [hardscaping service page](#) to explore driveway designs and request a durability assessment tailored to your traffic and climate needs.
